

## Containerised block ice plants

A company from Iceland, *Ingvar Icebits*, provides drawings and specifications for do-it-yourself fabrication of block ice plants at moderate charges. The plants are self-contained and can be relocated with standard equipment for heavy lifting and transport. The term “self-sufficient” implies that the plants are independent of external power sources, except fuel supplies. Thatched roofs provide adequate shelters for the plants in warm climates, protecting them against sun and rain.
